# Setup Resolution

Step 1:

Take a screenshot in Diablo 3 where you mouse over the XP bar.

Step 2:

Open the screenshot in Paint and find the X and Y point of the Black box, where the XP information is shown. You will need to do this 2 times, where one is with "Pool of Reflection Bonus" and one screenshot is without. This is needed because the bonus moves the location of the XP information.

Place your mouse at the upper left corner of the black box.

Then read the X and Y coordinate from Paint, its down in the lower left corner.
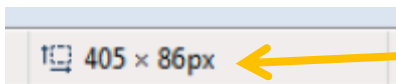

Then edit the file D3Test.exe.Config in notepad, with the X, X_Pool, Y and Y_Pool values:

Step 3:

Open the screenshot in Paint and find the width and height of the Black box, where the XP information is shown.

Make a selection of the black box with your mouse

Then read the width and height from Paint, its down in the lower left corner.

Then edit the file D3Test.exe.Config in notepad, with the width and height values.

(With Pool of Reflection Bonus, the box has the same width and height, so this is no need for this to be entered twice)

Step 4:

Test the program with 2 screenshots and see if it works. Check the value "Always

Check the OCR of the Screenshots" so you can see if the coordinates was correct.

If there is something missing of the XP information edit the values in

D3Test.exe.Config again until the all information is shown, like this:

Level 60 (265) Experience: 449,967,265 / 487,560,000

// Gombi 12-03-2014
